

WEBROY

KEEPING A STEP AHEAD

In the past year Webroy has continued its investment policy of upgrading equipment, with the introduction of the latest cutting edge technology. A third CNC wire former and the latest single Pave Huron were installed in February, followed by a new 5 axis CNC coiler.

A new export contract was awarded to Webroy for seat belt components, following which a 160 ton press and a new Digibend were commissioned in September. This added capacity has led to confirmation of an additional export contract for three more components destined for Germany.

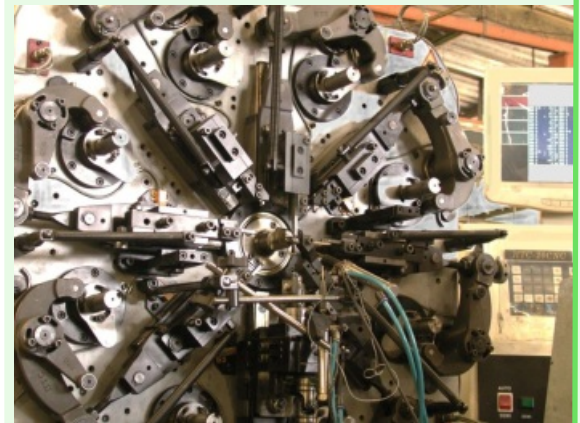

THE 160 TON PRESS
To cope with the export demand for seat belt components.

PAVE HURON
imported from England as the first one in the country, and third CNC wire former on Webroy's factory

THE EUROMAC DIGIBEND
CNC controlled bender for heavy wires and small pressings.

The new 5 Axis HTC 20 to handle more complex wire forms and springs.
